

### GENERAL DESCRIPTION

The SGM2554 is an integrated 95mΩ (TYP) power switch for self-powered and bus-powered Universal Series Bus (USB) applications. A built-in charge pump is used to drive the N-Channel MOSFET that is free of parasitic body diode to eliminate any reversed current flow across the switch when it is powered off. Low quiescent supply current and small package are particularly suitable in battery-powered portable equipment.

Several protection functions include soft-start to limit inrush current during plug-in, current limiting at 1.85A to meet USB power requirement, and thermal shutdown to prevent damage under over current conditions.

The SGM2554 is available in a Green SOT-23-5 package and is rated over the -40°C to +85°C temperature range.

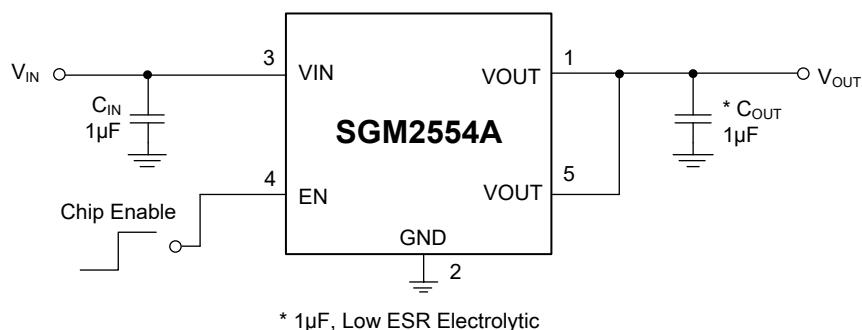

### FEATURES

- 95mΩ (TYP) High-side N-Channel MOSFET
- Guaranteed 1.1A Continuous Current
- 1.85A Current Limit
- Input Voltage Range: 2.2V to 5.5V
- Low 19µA Supply Current
- Less than 1µA in Shutdown Mode
- Soft-Start Function
- Thermal Shutdown Protection
- Under-Voltage Lockout Protection for VIN
- No Reversed Leakage Current
- Evaluated to IEC 60950-1, Ed 2, Am1, Annex CC, Test Program 1 with CB Report
- Available in Green SOT-23-5 Package

### APPLICATIONS

Motherboard USB Power Switch  
 USB Device Power Switch  
 Hot-Plug Power Supplies  
 Load Switch

### TYPICAL APPLICATION

## PACKAGE/ORDERING INFORMATION

MODEL	PACKAGE DESCRIPTION	SPECIFIED TEMPERATURE RANGE	ORDERING NUMBER	PACKAGE MARKING	PACKING OPTION
SGM2554A	SOT-23-5	-40°C to +85°C	SGM2554AYN5G/TR	SI4XX	Tape and Reel, 3000
SGM2554B	SOT-23-5	-40°C to +85°C	SGM2554BYN5G/TR	SI5XX	Tape and Reel, 3000

## MARKING INFORMATION

NOTE: XX = Date Code.

Green (RoHS & HSF): SG Micro Corp defines "Green" to mean Pb-Free (RoHS compatible) and free of halogen substances. If you have additional comments or questions, please contact your SGMICRO representative directly.

## ABSOLUTE MAXIMUM RATINGS

Input Supply Voltage.....	6V
EN Pin.....	-0.3V to 6V
Operating Temperature Range .....	-40°C to +85°C
Package Thermal Resistance SOT-23-5, $\theta_{JA}$ .....	250°C/W
Junction Temperature.....	+150°C
Storage Temperature Range .....	-65°C to +150°C
Lead Temperature (Soldering, 10s).....	+260°C
ESD Susceptibility HBM.....	2000V
MM.....	300V

## OVERSTRESS CAUTION

Stresses beyond those listed in Absolute Maximum Ratings may cause permanent damage to the device. Exposure to absolute maximum rating conditions for extended periods may affect reliability. Functional operation of the device at any conditions beyond those indicated in the Recommended Operating Conditions section is not implied.

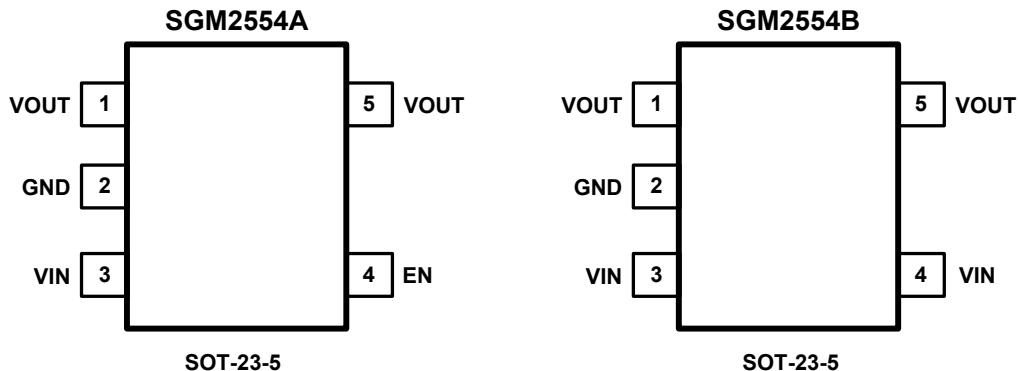

## ESD SENSITIVITY CAUTION

This integrated circuit can be damaged by ESD if you don't pay attention to ESD protection. SGMICRO recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage. ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

## DISCLAIMER

SG Micro Corp reserves the right to make any change in circuit design, or specifications without prior notice.

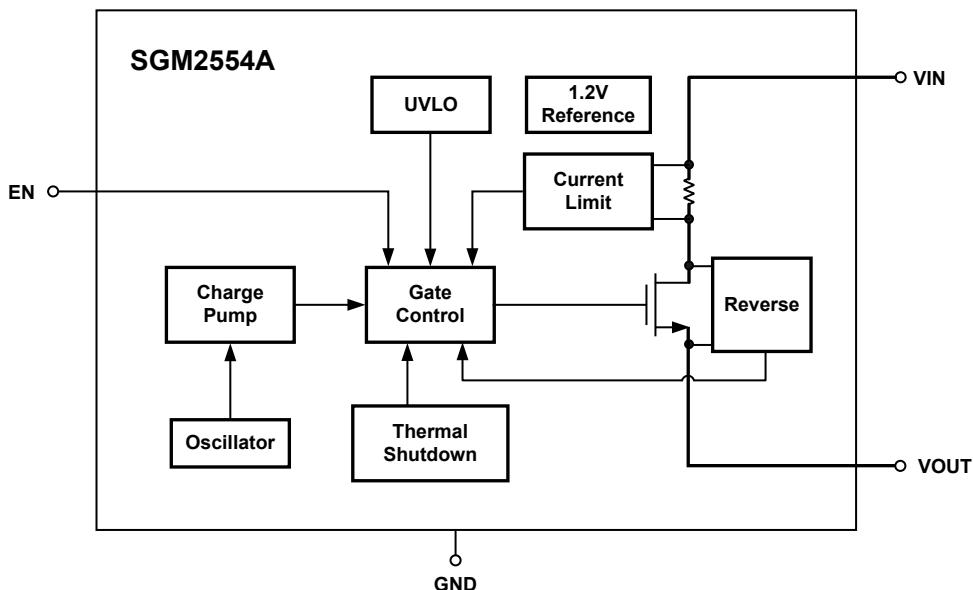

## PIN CONFIGURATIONS

## PIN DESCRIPTION

PIN		NAME	FUNCTION
SGM2554A	SGM2554B		
1, 5	1, 5	VOUT	Output Voltage.
2	2	GND	Ground.
3	3, 4	VIN	Power Input Voltage.
4	—	EN	Chip Enable. When EN = "High", chip is enabled.

## FUNCTIONAL DESCRIPTION

The SGM2554 is a high-side single N-Channel MOSFET switch and SGM2554A has active-high enable input.

### Input and Output

VIN (input) is the power supply connection to the circuitry and the drain of the output MOSFET. VOUT (output) is the source of the output MOSFET. In a typical circuit, current flows through the switch from VIN to VOUT toward the load. Both VOUT pins must be short on the board and connected to the load and so do both VIN pins but connected to the power source.

### Thermal Shutdown

Thermal shutdown shuts off the output MOSFET if the die temperature exceeds 125°C until the die temperature drops to 105°C.

### Soft-Start

In order to eliminate the upstream voltage droop caused by the large inrush current during hot-plug events, the “soft-start” feature effectively isolates power supplies from such highly capacitive loads.

### Under-Voltage Lockout (UVLO)

UVLO prevents the MOSFET switch from turning on until input voltage exceeds 1.65V (TYP). If input voltage drops below 1.6V (TYP), UVLO shuts off the MOSFET switch.

### Reverse-Voltage Protection

The reverse-voltage protection feature turns off the N-MOSFET switch whenever the output voltage exceeds the input voltage by 120mV (TYP). The SGM2554 keeps the N-MOSFET turned off until the output voltage is lower than the input voltage by 35mV (TYP) or the chip enable is toggled.

### Current Limiting and Short Protection

The current limit circuit is designed to limit the output current to protect the system supply. The current limit threshold is set internally to approximately 1.85A (TYP).

When the output is shorted to ground, it will be limited to 1.1A until thermal shutdown or short condition is removed.

### Power Dissipation

The device's junction temperature depends on several factors such as the load, PCB layout, ambient temperature, and package type. Equations that can be used to calculate power dissipation and junction temperature are found below:

$$P_D = R_{DS(ON)} \times I_{OUT}^2$$

To relate this to junction temperature, the following equation can be used:

$$T_J = P_D \times \theta_{JA} + T_A$$

where:

$T_J$  = junction temperature

$T_A$  = ambient temperature

$\theta_{JA}$  = the thermal resistance of the package

## APPLICATION INFORMATION

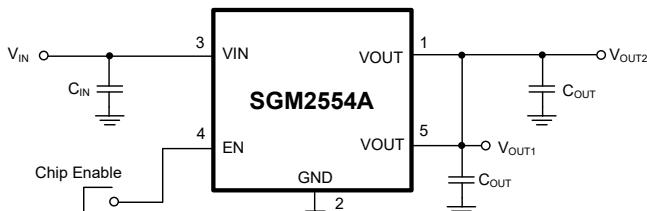

### Filtering

To limit the input voltage drop during hot-plug events, connect a  $1\mu\text{F}$  ceramic capacitor from VIN to GND. However, higher capacitor values will further reduce the voltage drop at the input.

Connect a sufficiently large capacitor from VOUT to GND. This capacitor helps to prevent inductive parasitics from pulling VOUT negative during turn-off or EMI damage to other components during the hot-detachment. It is also necessary for meeting the USB specification during hot plug-in operation. If SGM2554 is implanted in device end application, minimum  $1\mu\text{F}$  capacitor from VOUT to GND is recommended and higher capacitor values are also preferred.

In choosing these capacitors, special attention must be paid to the Effective Series Resistance (ESR) of the capacitors, to minimize the IR drop across the capacitor ESR. A lower ESR on this capacitor can get a lower IR drop during the operation.

Ferrite beads in series with all power and ground lines are recommended to eliminate or significantly reduce EMI. In selecting a ferrite bead, the DC resistance of the wire used must be kept to a minimum to reduce the voltage drop.

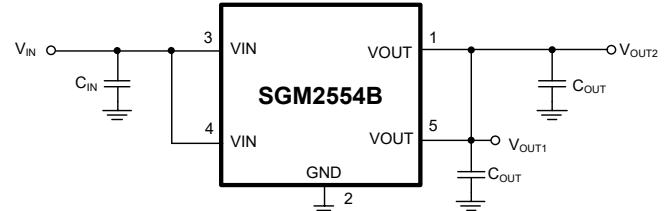

$C_{IN} = 1\mu\text{F}$ ,  $C_{OUT} = 470\mu\text{F}$  (Low ESR) on M/B  
 $C_{IN} = 1\mu\text{F}$ ,  $C_{OUT} = 330\mu\text{F}$  (Low ESR) on Notebook  
 $C_{IN} = 10\mu\text{F}$ ,  $C_{OUT} = 1\mu\text{F}$  on USB Device

Figure 1. High-side Power Switch with Chip Enable Control

### Layout and Thermal Dissipation

- Place the switch as close to the USB connector as possible. Keep all traces as short as possible to reduce the effect of undesirable parasitic inductance.
- Place the output capacitor and ferrite beads as close as possible to the USB connector.
- If ferrite beads are used, use wires with minimum resistance and large solder pads to minimize connection resistance.
- If the package is with dual VOUT or VIN pins, short both the same function pins as in Figure 1 or Figure 2 to reduce the internal turn-on resistance. If the output power will be delivered to two individual ports, it is specially necessary to short both VOUT pins at the switch output side in order to protect the switch when each port is plugged-in separately.
- Under normal operating conditions, the package can dissipate the channel heat away. Wide power-bus planes connected to VIN and VOUT and a ground plane in contact with the device will help dissipate additional heat.

$C_{IN} = 1\mu\text{F}$ ,  $C_{OUT} = 470\mu\text{F}$  (Low ESR) on M/B  
 $C_{IN} = 1\mu\text{F}$ ,  $C_{OUT} = 330\mu\text{F}$  (Low ESR) on Notebook  
 $C_{IN} = 10\mu\text{F}$ ,  $C_{OUT} = 1\mu\text{F}$  on USB Device
